

## Additional Information - BASF Catalyst R 3-11G

Page 1/1

BASF Catalyst R 3-1G is supplied in the oxidized form. If oxygen is to be removed from gases, the catalyst must be reduced i.e. regenerated beforehand.

**BASF Catalyst R 3-11G in the reduced i.e. regenerated form is pyrophoric.**

**Every care must be taken to ensure it is not exposed to significant amounts of oxygen.**

**Increased catalytic reaction can cause an extreme rise in temperature.**
